

Land more USDC on every cross-chain swap.

BRDG is a non-custodial bridge aggregator: one API call prices a transfer across up to 36 venues on 73 chains and returns the route that lands the most. Quoting the same 100 USDC at the same instant, BRDG paid more than OpenSea's swap on every shared route, and it adds BNB Chain routes OpenSea doesn't offer.

+89 bps

more USDC landed on SOL → ETH
(77–105 bps across samples):
\$8,920 per \$1M bridged

4/4

shared routes where BRDG
matched or beat OpenSea's
quote

+2

BNB Chain routes (SOL ↔ BSC)
BRDG can add to your swap

100 USDC → USDC, SAME INSTANT, PUBLIC UIS average of 3 synchronized samples per route

ROUTE	OPENSEA RECEIVES	BRDG RECEIVES	BRDG ADVANTAGE	PER \$1M BRIDGED
SOL → ETH Solana → Ethereum	98.948 via Relay	99.840 via Across	+89.2 bps	\$8,920
ETH → SOL Ethereum → Solana	99.746 via Relay	99.782 via CCTP	+3.6 bps	\$362
SOL → Base Solana → Base	99.933 via LI.FI / Relay	99.943 via Skip Go	+1.0 bps	\$102
Base → SOL Base → Solana	99.745 via Relay	99.786 via CCTP	+4.1 bps	\$410
SOL → BSC Solana → BNB Chain	Not offered	99.678 via Layerswap	New route	—
BSC → SOL BNB Chain → Solana	Not offered	99.640 via Mayan	New route	—

BRDG 99.840015 · Across row

Best route, after every fee

Ranked on the net amount that lands, after venue and platform fees. Only routes the user can actually sign can win.

Drop-in, non-custodial

Quote, build, sign, submit: no API key, no account, TypeScript SDK. Users sign in their own wallets. BRDG never holds funds or keys.

Pays only when it saves, and pays you

No BRDG fee unless the route beats the next-best quotes by more than 10 bps (then 5–15 bps, capped at \$10, already in the quote). OpenSea can add its own 0–15 bps referral share, paid to its wallet in the same signature.

Method. 100 USDC → USDC on each site's public page, fresh browser, no wallet. All sites typed at once and read at once (OpenSea vs BRDG within 8 ms); 3 samples per route, 2026-09-23 14:18–14:30 UTC. **BRDG:** net of its platform fee, best fully-priced route (excludes Allbridge, Meson, Husher, Rhino, Eco, whose quotes omit a fee charged on top or can't be verified). Source-chain gas not counted on either side. OpenSea showed a 0% OpenSea fee. The SOL → ETH gap reflects Relay's 1% fee and elevated Ethereum gas that day.
